From task demand to a bounded design test

Demand	Intervention	Observation	What to test next
Long horizon	Execution x phase	Train and unseen horizons diverge	Evaluate both axes
Transient cue	Local path W	Higher mean; uncertain effect	Test local preprocessing
Shared trunk	Actor-gradient scale	Trajectory and endpoint change	Tune gradient coupling

Tier 2: retrieval capacity supports addressing-dimension guidance, not an RL cause

Tier 3: Craftax, POPGym, and Minesweeper bound any global ranking
